

Quick Turnaround for Paragon Foods Industrial Flooring

Project At a Glance

Paragon Foods, a well-known specialty foods distributor, was a few steps away from completing construction on a new facility in Warrendale, Pennsylvania and needed an industrial flooring solution fast. They contacted Surface Technology, Inc to install 10,000 square feet of industrial resin flooring with a short turnaround time during the busiest season of the year. The team mobilized quickly and worked diligently to install the flooring on time and at a level of perfection that speaks to their longstanding reputation for excellence in the industrial flooring industry.

Materials and Process

Our Process

1. The STI team prepped the floor by shot-blasting the new concrete surface and cleaning it.
2. We set the area up for proper drainage.
3. Our team applied the FasTop12S urethane coating to the flooring surface.
4. We finished the installation by applying a binder resin on top.
5. To protect the room from water, we also added cove bases around the perimeter of the space.

Material

Paragon Foods knew what it needed and when they needed it: a General Polymers FasTop 12S Urethane Slurry flooring system.

"They were in and out quickly, did a great job, and the new food processing floor is performing great,"

*Rich Mosgrove, VP of Operations,
Paragon Foods*

"It was 100 mph from beginning to end, but when you have a tight-knit team that knows the product you can make miracles happen,"

*Michael Greenblatt,
President, Surface
Technology Inc.*

Project Challenges

The food company needed to complete the project between Christmas and New Year's, which is the busiest season for flooring professionals, with many plants booking maintenance in advance to get work done during the holiday shutdown. Other flooring teams would not be able to get the job done on such short notice. A delay in the flooring installation, however, would have jeopardized the food company's remaining construction schedule.

STI's Solution

Understanding the critical need to get this flooring project complete to stay on schedule, the Surface Technology team was able to mobilize quickly to take on the job. With decades of business in the resin flooring industry, and a project lead with 20+ years of professional experience, STI had the know-how to complete the project during the short 7-day window.

Surface Technology, Inc. is the expert in protection, restoration, and enhancements of industrial concrete surfaces. Over 50 million square feet successfully installed in the U.S. since 1988. Contact us today for a quote.
